Mikhail Kogan

Agentic AI Engineer | LangGraph + MCP | Production AI Infrastructure

About me

Agentic & Platform Engineer building production-grade, stateful agent systems with **LangGraph orchestration and MCP-based tools** and memory. Creator of **CyberMem** — a **self-hosted MCP platform for shared AI memory** — and EasyOref, a **LangGraph-powered alert agent that uses MCP tools** for multi-source validation in real time.
Proven leader: **scaled team from 1 to 13 engineers, scaled products from 0 to 5M+ users, maintained 99.5–100% uptime in production.**

Experience

▼ CyberMem

Open Source Project: **Production-grade, self-hosted MCP** (Model Context Protocol) **memory server** for **agentic AI infrastructure**. Enables **Claude, ChatGPT, Gemini, Cursor, and Perplexity** to share **one persistent memory** across tools and sessions with **secure remote access**, **observability**, and **one-command deployments** (macOS, Linux, Raspberry Pi, Kubernetes). cybermem.dev / GitHub / NPM

Creator & Lead Developer: 2025 — Present

- Built a **self-hosted MCP platform** that provides a **durable memory + tool layer** for **LangGraph / LangChain** workflows, so agents keep **long-term context** instead of rebuilding state every session.
- Shipped **multi-client support** for leading LLM apps (**Claude, GPT, Gemini, Cursor, Perplexity**) with a consistent **schema-driven tool interface**.
- Implemented **per-client access control** with **Zero-Trust networking** and **remote tool execution**, enabling safe agent calls across **Docker**, **Raspberry Pi**, and **Kubernetes**.
- Added **production observability** (logs/metrics-ready design) and **auditable traces** to support debugging and reliability.
- Built an **IaC-driven CLI** + **CI/CD automation** to deploy the full stack (MCP server + agent workflows + dashboard) in minutes.

▼ Centerya

AI **CRM platform made by Israeli seed stage startup**, designed for real estate agents in the US market.

Tel Aviv, Israel

Founding Engineer & Mobile Infrastructure: 2024 — 2025

Centerya iOS App: https://apple.co/3TuHEJB. A mobile app for AI CRM with support of **VoIP calls** and **Siri Intents.**

- **Architected and solely delivered** an AI-powered iOS CRM application (Centerya) from concept to App Store launch **(VoIP, Siri Integrations, App Intents)**.
- Integrated Twilio SDK to provide **VoIP calls with AI-generated call summaries and property suggestions** for US real-estate agents.
- Established mobile infrastructure with **real-time monitoring** (Sentry)**, centralized logging (AWS CloudWatch),** and **alerting** to keep **crash-free sessions above 99%**.
- Built and maintained a **CI/CD pipeline** in Xcode Cloud, enabling **automated testing and weekly feature releases**.
- Implemented a modular SwiftUI + SwiftPM architecture **optimized for caching and startup performance**.

▼ Tinkoff Bank

The **largest digital-only bank in Western Europe** operated in the Russian market.

Russia

Team Lead — Dolyame iOS platform: 2021 — 2023

dolyame.ru — Russia's first BNPL (Buy Now, Pay Later) service. Comparable to Klarna (Europe) and Afterpay (US).

- Launched the BNPL iOS app as a solo developer → scaled it to **1M+ downloads and 300K MAU in the first year**.
- **Grew the iOS platform team from 1→13 engineers**, establishing CI/CD standards and code review processes to **support rapid product growth**.
- Architected a UI testing workflow that allowed QA to automate regression tests, **reducing manual testing time by 70%.**
- Transitioned the team from Git Flow to trunk-based development with feature flags, cutting **release preparation time from 4 days → 1 day.**
- Developed an LLM-assisted data extraction pipeline to **automate team burnout analysis and capacity planning,** while **maintaining 99.5–100% crash-free rates for financial flows**.

iOS Developer — Traffic Fines: 2018 — 2021

Traffic Fines App — **consumer fintech iOS app** enabling users to **pay traffic fines** conveniently.

- Refactored **critical payment** and **fine lookup** modules in a legacy app, ensuring **99.7% crash-free sessions** for **5M+ users**.
- Built a **robust testing infrastructure** (Unit, UI, Snapshot) with strong coverage for **financial transaction flows**.

▼ GLOBUS Ltd.

Nizhniy Novgorod, Russia

Junior iOS Developer: 2016 — 2017

- Developed and **shipped multiple iOS applications to the App Store** as a junior developer.

Education

BSc in Computer Science & IT, Nizhniy Novgorod State University: 2013 — 2017

Skills

▼ Agentic AI Development

LangGraph, LangChain, multi-agent orchestration, stateful workflows, tool calling / ReAct, human-in-the-loop, evaluation, tracing.

▼ Model Context Protocol (MCP)

MCP servers, schema-driven tools (Zod), JSON-RPC 2.0, and tool and memory integration for LLM agents.

▼ Platform & Infrastructure

TypeScript/Node.js, Docker, Kubernetes, Helm, GitHub Actions, BullMQ/Redis, Prometheus/Grafana, Tailscale, Traefik, Linux, Raspberry Pi deployments.

Personal Projects

EasyOref — Production **LangGraph Agent with MCP Tools** for Pikud HaOref (Israeli Home Front Command) safety notifications (Live Demo). Github

- Built a **real-time, multi-step agent workflow** that enriches official civil-defense alerts with context (rocket counts, interceptions, impact areas) and sends **clear, calm notifications** to Telegram.
- Implemented a **5-stage StateGraph pipeline**: deterministic pre/post-filters → single **LLM extraction** node → **voting/consensus** logic → conditional **clarification** branch when confidence is low.
- Integrated multiple **MCP servers/tools** (Telegram source channels, Telegram bot delivery, official Pikud HaOref data) with **tool calling (ReAct-style loops)** for conflict resolution.
- Engineered **reliable orchestration** with **BullMQ + Redis**, including **human-in-the-loop interrupts** and idempotent inline message edits; optimized the core alert path to **< 1s**.
- Deployed a **production-style stack** on **Raspberry Pi** using **Docker** + **Tailscale**, with monitoring-oriented design.

Hearly — **Real-time speech pipeline** combining **Azure Speech** and **Whisper** for multilingual transcription.
