

Mikhail Kogan

AI Engineer (Agents & Platform Infrastructure)

mikhailkogan.dev · mikhailkogan17@gmail.com · Tel Aviv, Israel · www.linkedin.com/in/mikhail-kogan-platform · github.com/mikhailkogan17

Platform engineer with 10+ years building production systems: scaled products to **5M+ users** and grew an iOS platform team from **1 to 13 engineers**. Created and running several AI products end to end — multi-agent orchestration (LangGraph, Mastra), browser and computer-use automation, LLM observability — shipped with native macOS apps.

Experience

Centerya

Tel Aviv, Israel

Founding Engineer & Mobile Infrastructure

2024 – 2025

- Owned the **end-to-end development** of a SwiftUI iOS app, integrating an **AI-driven call-summary feature** by interfacing with a backend ML service.
- Engineered the **mobile infrastructure** (Twilio VoIP, Siri Intents, App Extensions, background processing) and **set up and single-handedly ran CI/CD for 1.5 years**.
- Took features **straight from the CPO as business requirements only** (no analysts) and owned everything after: design, code, CI and release to QA and the App Store.
- Established production observability using Sentry and AWS CloudWatch with custom alerting, maintaining **99%+** crash-free sessions.

Tinkoff Bank

Saint Petersburg, Russia — **Leading Eastern European digital-only bank** operated in the Russian market. tinkoff.ru

Team Lead — iOS Platform, Dolyame

2021 – 2024

- Launched Russia's first BNPL app and scaled the iOS platform team **from 1 to 13 engineers**, growing the product to **1M+ downloads** and **300K MAU** in its first year.
- Architected the app and an **external SDK adopted by 7+ retail partners, including major chains like Golden Apple**; cut manual QA by **70%** while keeping **99.5–100% crash-free sessions**.
- Grew people**: promoted a senior+ engineer to tech lead, a middle to senior and three middles to middle+; brought new hires to a working setup in **2–3 days** with documented onboarding.
- Built the team process: **Scrumban with 2-week releases**, T-shirt estimation and three-amigos refinement, retros; moved to trunk-based development, cutting release prep from **4 days to 1 day**.

iOS Developer, Traffic Fines

2017 – 2021

- Refactored critical payment and fine-lookup modules for an app serving **5M+ users**, maintaining a **99.7% crash-free rate** on financial transaction flows.
- Built comprehensive testing infrastructure (Unit, UI, Snapshot) to prevent regressions in high-risk payment flows.

GLOBUS Ltd.

Nizhny Novgorod, Russia

Junior iOS Developer

2016 – 2017

- Developed and shipped multiple iOS applications to the App Store, gaining a foundation in Swift, UIKit, and product delivery.

Projects

Applygent | 2026 – Present

Autonomous job-application platform: finds roles, scores fit, tailors the CV and applies on its own, with a human approving each step. applygent.mikhailkogan.dev

- Job search that works like a recruiter**: scans job boards, scores every role for fit with LLMs and writes a **tailored one-page CV for each match** — the user only taps approve or reject in Telegram.
- Applies by itself**: a native macOS app runs a **Stagehand browser agent as a built-in sidecar** that fills in and submits real application forms from the user's own computer — **46 applications submitted with no human typing**.

cycler | 2026 – Present

An AI teammate inside Linear, the team task tracker — like GitHub Copilot, but running on your own computer. github.com/mikhailkogan17/cycler

- Two clicks from task to finished code**: delegate an issue to the agent with one button, and it answers in the issue, does the work and opens a ready pull request for review.
- 4–5x cheaper to run** than other available plugins, with automatic quality checks so broken code never reaches review.

EasyOref | 2026 – Present

Real-time alert agent: aggregates alerts and news from **15+ sources**, filters, verifies and summarizes them through a 5-stage LangGraph pipeline, and delivers one clear update. [GitHub](https://github.com)

- Built full tracing and monitoring (LangSmith, BetterStack) that lets the **LLM debug itself from its own traces and logs**, cutting debugging time **from hours to minutes**.
- Runs unattended on a Raspberry Pi with **zero manual interventions over 2 months**.

Expertise

Agentic AI

LangGraph, Mastra, MCP / FastMCP, RAG, tool calling, Stagehand, LangChain, Zod, LangSmith, OpenAI API, Anthropic API

Backend & Platform

TypeScript, Node.js, Docker, Fly.io, Kubernetes, Redis, BullMQ, GitHub Actions, GitLab CI

Infra & Observability

Prometheus, Grafana, AWS CloudWatch, Sentry, BetterStack, Traefik, Tailscale, Xcode Cloud

Education

BSc in Computer Science & IT

Nizhny Novgorod State University — 2013 – 2017

Languages

Russian
native

English
Upper-Intermediate
