Mikhail Kogan

Platform Engineer — AI Agents & Developer Productivity

mikhailkogan.dev · mikhailkogan17@gmail.com · Tel Aviv, Israel · www.linkedin.com/in/mikhail-kogan-platform · github.com/mikhailkogan17

Platform engineer with 10+ years building production systems: scaled products to **5M+ users**, grew an iOS platform team from **1 to 13 engineers** and owned CI/CD and release automation end to end. Now builds **AI agents for developer productivity and products**: a Linear-to-PR coding agent behind CI quality gates, multi-agent orchestration (LangGraph, Mastra), **Browser Use automation** and LLM observability.

Experience

Centerya

Tel Aviv, Israel — **Israeli seed-stage startup building an AI CRM** for US real-estate agents. centerya.com

Founding Engineer, Mobile Infrastructure 2024 – 2025

- **Built and shipped the company's AI-powered iOS app single-handedly**, from first commit to App Store: in-app calling, **AI call summaries**, Siri and App Extensions.
- **Owned every feature from business requirement to release**, with no analysts in between, and **ran CI/CD alone** — weekly, fully automated App Store releases.
- Set up production monitoring and alerting with Sentry and AWS CloudWatch, keeping **99%+ crash-free sessions**.

Tinkoff Bank

Saint Petersburg, Russia — **Leading Eastern European digital-only bank** operating in Russia. tinkoff.ru

Team Lead — iOS Platform, Dolyame 2021 – 2024

- Launched **Russia's first buy-now-pay-later app** (like Klarna) and grew the iOS platform team **from 1 to 13 engineers**; **1M+ downloads** and **300K MAU** in year one.
- Architected the app and an **external SDK adopted by 7+ retail partners, including major sport & fashion chains of Russia (Sportmaster, Golden Apple and others)**; cut manual QA by **70%** while keeping **99.5–100% crash-free sessions**.
- **Mentored 4 engineers to promotion** (3 to senior, 1 to tech lead); new hires productive in **2–3 days**.
- **Cut release prep from 4 days to 1 day** by moving to trunk-based development and a steady **2-week release cycle**.

iOS Developer, Traffic Fines 2017 – 2021

- Kept payments **99.7% crash-free** in an app with **5M+ users** while rebuilding its critical payment and fine-lookup modules.
- Built the automated test suite (Unit, UI, Snapshot) that **guarded high-risk payment flows against regressions**.

GLOBUS Ltd.

Nizhniy Novgorod, Russia

Junior iOS Developer 2016 – 2017

- Developed and **shipped multiple iOS apps to the App Store**.

Projects

Cycler 2026 – Present

An AI teammate inside Linear, the team task tracker — like GitHub Copilot, but running on your own computer. github.com/mikhailkogan17/cycler

- **Two clicks from task to finished code:** delegate an issue to the agent with one button, and it answers in the issue, does the work and opens a ready pull request for review.
- **4–5x cheaper to run** than comparable agent plugins, with automatic quality checks so broken code never reaches review.

Applygent 2026 – Present

AI job-search assistant: finds roles, scores fit, tailors the CV and fills in applications on request, with the user approving each step in the native app. applygent.mikhailkogan.dev

- **Job search that works like a recruiter:** a **7-step Mastra workflow** scans job boards, scores every role for fit, **checks past applications in Gmail so it never applies twice**, and writes a **tailored one-page CV for each match**.
- **Browser Use agent that applies on command:** Stagehand, run from the native macOS app, fills in and submits each form on the user's own computer, **only when the user explicitly triggers it** — **46 applications submitted with no manual typing**.

EasyOref 2026 – Present

*Real-time agent that turns **Israeli Home Front Command rocket alerts** and news from **15+ sources** into one clear, verified update for families abroad. GitHub*

- Tracing (LangSmith, BetterStack) on a **5-stage LangGraph state machine** lets the **LLM debug itself from its own logs**: debugging **from hours to minutes**.
- Runs unattended on a Raspberry Pi with **zero manual interventions over 2 months**.

Mentoring

***10+ mentees** via GetMentor, Mentoring.Digital and others, covering AI agents & infra, mobile, platform engineering and interview prep.*

Expertise

Agentic AI

Harness Engineering, LangGraph, Mastra, MCP / FastMCP, LLM extraction, tool calling, Stagehand, Browser Use, Computer Use, LangChain, LangSmith, OpenAI API, Anthropic API

Backend & Platform

TypeScript, Node.js, Docker, Fly.io, Kubernetes, Redis, BullMQ, GitHub Actions, GitLab CI

Infra & Observability

Prometheus, Grafana, AWS CloudWatch, Sentry, BetterStack, Traefik, Tailscale, Xcode Cloud

Education

BSc in Computer Science & IT

Nizhniy Novgorod State University — 2013 – 2017

Languages

Russian Native

English Upper-Intermediate
