

Mikhail Kogan

AI Engineer (Agents & Platform Infrastructure)

mikhailkogan.dev · mikhailkogan17@gmail.com · Tel Aviv, Israel · 0552993875 · www.linkedin.com/in/mikhail-kogan-platform · github.com/mikhailkogan17

Platform engineer with 10+ years building production systems, now building agent infrastructure full-time. Scaled products to 5M+ users and grew an iOS platform team from 1 to 13 engineers. Since 2025: Applygent, a multi-agent job-application platform (Mastra pipeline, browser-driving apply agent, multi-provider LLM fallback cascade) on Fly.io with a native SwiftUI client; and cycler, a published Claude Code plugin enforcing a contract-first loop through blocking pre-tool hooks.

Experience

Centerya

Tel Aviv, Israel

Founding Engineer & Mobile Infrastructure

2024 – 2025

- Owned the **end-to-end development** of a SwiftUI iOS app, integrating an **AI-driven call-summary feature** by interfacing with a backend ML service.
- Engineered the **mobile infrastructure**, including Twilio VoIP integration, Siri Intents, App Extensions, and a robust background-processing flow.
- Established production observability using Sentry and AWS CloudWatch with custom alerting, maintaining **99%+** crash-free sessions.
- Automated the release lifecycle with an Xcode Cloud CI/CD pipeline, enabling weekly **unattended deployments** to the App Store.

Tinkoff Bank

Saint Petersburg, Russia — **Leading Eastern European digital-only bank** operated in the Russian market. tinkoff.ru

Team Lead — iOS Platform, Dolyame

2021 – 2024

- Led and scaled the iOS platform team from 1 to 13 engineers for Russia's first BNPL service, growing the product to **1M+ downloads** and **300K MAU** in its first year.
- Architected the app and external SDK, defined CI/CD standards, code review processes, and automated testing, reducing manual QA effort by **70%**.
- Migrated the team from Git Flow to trunk-based development with feature flags, cutting release preparation from **4 days to 1 day**.
- Developed a Python + ChatGPT 3.5 script that pulled team workload data from the Jira API to analyze capacity and utilization, improving visibility into **team capacity and burnout risks**.

iOS Developer, Traffic Fines

2017 – 2021

- Refactored critical payment and fine-lookup modules for an app serving **5M+ users**, maintaining a **99.7% crash-free rate** on financial transaction flows.
- Built comprehensive testing infrastructure (Unit, UI, Snapshot) to prevent regressions in high-risk payment flows.

GLOBUS Ltd.

Nizhny Novgorod, Russia

Junior iOS Developer

2016 – 2017

- Developed and shipped multiple iOS applications to the App Store, gaining a foundation in Swift, UIKit, and product delivery.

Projects

Applygent (Creator & Solo Engineer) | 2026 – Present

Multi-agent job-application platform: job scoring, CV tailoring, PDF generation, browser-driven apply. applygent.mikhailkogan.dev

- Built a **Mastra multi-agent pipeline** (scout → dedupe → LLM scoring → LLM tailoring → review → apply), with a **Stagehand** browser agent driving real application forms through a tool-calling loop.
- Engineered a **multi-provider LLM fallback cascade** with per-stage cooldowns, keeping the pipeline alive through provider **401/402/503 quota and payment failures** instead of dying on a single vendor.
- Shipped as a TypeScript monorepo (**6 workspace packages**) with the server on **Fly.io**, an on-Mac executor daemon over WebSocket, Google OAuth + scoped JWTs, and a native SwiftUI client.

cycler (Creator & Maintainer) | 2026 – Present

Published Claude Code plugin running an autonomous, Linear-driven development loop. github.com/mikhailkogan17/cycler

- Built the full loop: **poll the board → dispatch a background agent session → contract-first implementation → quality gate → PR → board update**, with launchd scheduling and idempotent dispatch.
- Made quality **enforced, not advisory**: PreToolUse hooks **deny** edits before a task contract exists and **deny** commits on a red gate; the gate composes lint, format, build, danger and tests with a repo-local override.
- Added **independent review stages** — a separate auditor agent plus multiple review lenses re-reading the diff — over a **Linear OAuth app (actor=app)** with token refresh, so the agent acts as itself on the board.

EasyOref (Solo Agent Developer) | 2026 – Present

Production alert agent with end-to-end reasoning observability. [GitHub](https://github.com)

- Developed a 5-stage LangGraph pipeline to process **alerts and news from 15+ sources**, from pre-filtering to synthesis and delivery.
- Integrated LangSmith and BetterStack for full reasoning observability, **reducing agent debugging time from hours to minutes**.
- Deployed and maintained the agent on a Raspberry Pi ARM64 with Docker and Tailscale, **achieving zero manual interventions over a 2-month period**.

CyberMem (Creator & Lead Maintainer) | 2025 – Present

Indie MCP platform for production-grade agents (**550+ commits, 25+ releases**). cybermem.dev

- Architected a complete agentic platform using FastMCP and Next.js, **deployed on Docker/k8s via a single-command** IaC CLI.
- Engineered zero-trust access using Traefik ForwardAuth and Tailscale, **securing the platform for production use**.
- Implemented comprehensive observability with Prometheus, structured logging, and request tracing to ensure **debuggability and per-client audit**.

Expertise

Agentic AI

LangGraph, Mastra, MCP / FastMCP, RAG, tool calling, Stagehand, LangChain, Zod, LangSmith, OpenAI API, Anthropic API

Backend & Platform

TypeScript, Node.js, Docker, Fly.io, Kubernetes, Redis, BullMQ, GitHub Actions, GitLab CI

Infra & Observability

Prometheus, Grafana, AWS CloudWatch, Sentry, BetterStack, Traefik, Tailscale, Xcode Cloud, Raspberry Pi ARM64 /

Education

BSc in Computer Science & IT

Nizhniy Novgorod State University — 2013 – 2017

Languages

Russian	English	Hebrew
native	Upper-Intermediate	Aleph+ (studying)
